

Absorber Module 100

- **Article-No.: 85-900-032**
- **Use**
 - Heavy industry
 - Rolling mills
 - Presses
- **Delivery occurs completely in a mounted manner with a custom-designed encoder type or can be attached later**

General characteristic data

Description

The Absorber-Module 100 decouples our encoders of vibrations and shocks. By elastomer-elements the device is stored with low intrinsic resonance. The tangential arrangement of the elements produces a high torsional stiffness around the axis of rotation (no measurement influence).
